ENVIRONMENTAL (GREEN) CRITERIA

No.	Requirement
1.	The Goods being procured are not included in the Product List; however, LTG shall independently determine environmental protection criteria relevant to the subject of the procurement, applying this environmental principle at one, several or all stages of the product's life cycle: 4.4.4.4. the goods are robust, durable and functional; they or their components are suitable for repeated use and/or are easily repairable and/or replaceable; The train door parts being procured are intended for the repair of existing equipment and the replacement of worn components. The parts are easily replaceable, so their use restores the functionality of the door systems and extends their service life. The ability to repair and replace individual components reduces the need to replace the entire system with new equipment, thereby ensuring a more efficient use of resources and a longer product life cycle.
