

Kopija __Dapr

Kubernetes services	Description
dapr-operator	Manages component updates and Kubernetes services endpoints for Dapr (state stores, pub/subs, etc.)
dapr-sidcar-injector	Injects Dapr into annotated deployment pods and adds the environment variables <code>DAPR_HTTP_PORT</code> and <code>DAPR_GRPC_PORT</code> to enable user-defined applications to easily communicate with Dapr without hard-coding Dapr port values.
dapr-placement	Used for actors only. Creates mapping tables that map actor instances to pods
dapr-sentry	Manages mTLS between services and acts as a certificate authority. For more information read the security overview
